LEADERSHIP PORTFOLIO · 2026

Venkata Thrinadhareddy Koyya

SENIOR SDET → QA / QUALITY ENGINEERING MANAGER

12+ years delivering quality engineering in banking and financial services. Former Technical Test Lead with hands-on experience in regression governance, coordinating enterprise test execution, building engineering capability and improving automation results.

Based in London, United Kingdom.

SELECTED LEADERSHIP EVIDENCE

12+	80	~67%	+22pp
Years in quality engineering	Testers coordinated for regression delivery	Shorter regression execution window	Reported automation suite pass rate

My next step: Bring proven technical and test-delivery leadership into a QA Manager role, helping teams deliver faster feedback, higher-confidence releases and sustainable engineering practices.

MANAGER-RELEVANT CAPABILITIES

Leadership in action, not just technical expertise.

The strongest evidence in my career is delivery ownership at scale, quality decision-making and making other engineers more effective.

01 / RELEASE GOVERNANCE

Structuring enterprise regression across 80 testers

At NatWest, defined release regression scope, priorities, estimates, execution schedules and allocation of test work. Monitored progress, supported blocker resolution and defect triage, examined recurring failures and established release validation quality gates.

PRIORITISATION | EXECUTION VISIBILITY | RISK MANAGEMENT

02 / PEOPLE ENABLEMENT

Improving capability through hands-on technical leadership

Mentored engineers, reviewed automation changes, promoted reusable utilities and consistent framework standards. As Technical Test Lead, supported onboarding, pair programming and daily regression execution alongside delivery planning.

MENTORING | CODE REVIEW | ENGINEERING STANDARDS

03 / QUALITY GOVERNANCE

Creating clearer and more actionable quality signals

Used risk-based coverage, defect trends, failure diagnostics and scheduled CI regression pipelines with Allure reporting. Extended assurance to screenshot-baseline visual comparison and accessibility violation reporting.

RELEASE READINESS | QUALITY SIGNALS | ASSURANCE COVERAGE

What this means for a QA Manager role

I can connect engineering work to release outcomes: decide what matters, coordinate execution, expose risks, coach engineers and improve the systems that determine delivery quality. My documented leadership is technical and delivery-focused; I am not claiming prior formal direct-report, hiring or budget responsibility.

SELECTED DELIVERY TRANSFORMATIONS

Measurable improvement. Repeatable engineering practice.

Selected results directly supported by my résumé; effects beyond the reported metrics are not assumed.

3 → 1 day

~67% reduction

Scale regression using cloud and parallel testing

Contribution: Introduced BrowserStack cloud-device integration and parallel mobile execution while working as Technical Test Lead for the NatWest client through Infosys.

Outcome: End-to-end regression execution reduced from three days to one day. Received the NatWest LOV Award (June 2022) for BrowserStack/cloud-testing enablement.

53% → 75%

+22 percentage points

Improve trust in regression automation signals

Contribution: Implemented automated rerun logic and coordinated suite-stabilisation activity, supported by analysis of recurring failures.

Outcome: The reported automation regression suite pass rate improved from 53% to 75%.

Always-on quality

Qualitative improvement

Strengthen continuous assurance and feedback

Contribution: Created scheduled GitLab CI regression with notifications and diagnostics; integrated Allure reports, visual comparison and Evinced accessibility checks.

Approach: Piloted GitLab Duo-assisted framework review and Kiro AI skills for story-based draft test-case creation. No unsupported time-savings figure is attributed.

THE MANAGEMENT LESSON

Quality improvements last when they are treated as operating practices: clear ownership, usable metrics, feedback loops and engineering standards — rather than one-off tooling projects.

FORWARD-LOOKING LEADERSHIP

How I would lead a Quality Engineering team.

A practical philosophy for the transition from Senior SDET and Technical Test Lead into formal management.

People. Delivery. Quality.

Coach engineers and build ownership; align scope with delivery risk; use trusted signals to improve release confidence. Give stakeholders clear trade-offs instead of a blanket claim that everything is tested.

PEOPLE & CULTURE

Regular coaching, consistent expectations, sharing practical technical knowledge, inclusive engineering standards and space for engineers to own improvements.

OPERATING RHYTHM

Risk-led planning, visible blockers and quality gates, purposeful stakeholder updates, review of defect patterns and automation stability.

My first 90 days

DAYS 1–30

Listen & baseline

- Meet the team, product and engineering stakeholders.
- Map current test delivery and recurring risks.
- Baseline cycle time, defect trends and automation failures.

DAYS 31–60

Align & prioritise

- Agree team outcomes and quality expectations.
- Prioritise delivery bottlenecks and unstable coverage.
- Set up coaching and knowledge-sharing cadence.

DAYS 61–90

Ship & learn

- Implement targeted improvements.
- Establish concise release quality reporting.
- Review impact and agree longer-term roadmap.

Proposed measures of success: regression cycle time, automation stability, escaped defects, release-readiness predictability and team capability progression. These are future measures to agree with a team — not historical performance claims.

EXPERIENCE AND CREDENTIALS

Credibility built across financial services.

A progression through engineering and test leadership roles spanning NatWest Group, Infosys and Charles Schwab client work.

OCT 2026 – PRESENT

Software Development Engineer in Test · NatWest Group

Current role within quality engineering, building on delivery and automation responsibilities.

JUL 2023 – SEP 2026

Quality Automation Specialist · NatWest Group

Regression delivery governance, CI pipelines, mentoring and quality improvement.

JUN 2019 – JUN 2023

Technical Test Lead · Infosys (NatWest client)

Mobile framework delivery, BrowserStack parallelisation, planning and onboarding support.

MAR 2014 – MAY 2019

Test Analyst / Software Engineer · Infosys

Charles Schwab financial-platform test automation and earlier engineering work.

DELIVERY & GOVERNANCE

Jira, Zephyr, Confluence, Agile/Scrum, regression planning, risk prioritisation, quality gates, defect triage, UAT.

AUTOMATION & PLATFORM

Java, Python, C#, Selenium, Appium, Cucumber, REST Assured, AWS, BrowserStack, GitLab CI, Jenkins, Allure.

RECENT INNOVATION

Kiro AI, GitLab Duo, screenshot-based visual testing, accessibility assurance with Evinced / Deque.

RECOGNITION & EDUCATION

NatWest LOV Award (2022); Infosys Tech Champ and two Insta Awards. Infosys certifications across Agile, mobile testing, Selenium and DevOps. MCA, JNTU Kakinada; B.Sc., Andhra University.

Open to QA / Quality Engineering Manager opportunities
